

Tables and Graphs Practice

Name _____ BL _____

For each of the following, construct a **table and graph** on another page.

1. **Use Table #1:**

What is the relationship between the distance below the surface and the number of fossils collected? The students collected **three** buckets at each location. At 80 cm below there were 0, 0 and 1 fossil; 140 cm had 2, 3, and 0 fossils, 200 cm had 8, 10 and 7 fossils, 260 cm had 15, 16, and 16 fossils; and 320 cm had 32, 30, and 35 fossils.

2. **Use Table #2:**

In 1988 and 1989, the USA imported a lot of food. We imported in billions of dollars the following amounts: Shellfish, \$2.7 & \$4.2; Coffee, \$2.5 & \$2.5; Beef and Veal, \$1.7 & \$1.4; Pork, \$0.9 & \$0.8; Orange Juice, \$0.6 & \$0.8; Cheese, \$0.4; Grapes, \$0.3 & \$0.5; Tomatoes, \$0.2 & \$0.5.

3. **Use either Table #1 or 2. Draw your own.**

Bill and Sheri decided to study how many sit-ups athletes who are in top condition can do in two minutes. They wanted to see whether the number of sit-ups done is related to their ages. Bill and Sheri each found 9 athletes to test. **Combine the two sets of data into one table and graph.**

Bill's Data

Age (years)	Number of sit-ups
14.5	95
17	100
15.5	97
18	102
14	93
16.5	99
15	9
17.5	101
16	98

Sheri's Data

Age (years)	Number of sit-ups
18	105
16.5	97
15	90
14	85
17.5	99
16	95
15.5	93
17	99
14.5	89
